Data Scientist with 7 years of experience in healthcare, business, and marketing analytics. I give leaders clear visibility into their key metrics and turn complex data into visual stories that executives can follow and act on. Working in marketing and teaching graduate analytics courses taught me to explain technical results to non-technical audiences. More recently, I have been using AI to build web applications for advanced analytics. My expertise in data science, especially relational databases, and my knowledge of web development give me an advantage here: I know what the LLMs are doing, so I can review their output and catch mistakes instead of trusting them blindly.

EXPERIENCE

Baptist Health of South Florida **2022/10 - Present**
Performance Analyst 2

- Pioneered self-service Tableau dashboard development for Baptist Outpatient Services, creating intuitive visualizations that translated complex data into clear information the end-user can act on.
- Served as a Subject Matter Expert in data-driven projects, using analytical insights to guide leadership in strategic and operational decision-making.
- Led several initiatives to drive change in data collection and tracking methods, ensuring data quality, reliability, and drill-down capability in reporting.
- Took projects from scratch: defined the metrics, designed the data intake methods, and built the output and reporting delivered to executives.
- Solved problems with analytics and tools that simplified processes and surfaced insights that would otherwise have stayed hidden.
- Worked on several AI pilots and initiatives to drive AI use across the entity.

St. Thomas University **2020/10 - 2022/07**
Professor of Data Analytics

- Taught Master of Science in Big Data Analytics courses focusing on Data Visualization, Business Analytics, Machine Learning, and Data Reporting, building a foundation in both statistical modeling and effective data communication.
- Guided students through hands-on, real-world projects using tools like Tableau, Power BI, and Looker Studio, showing how raw data becomes final, presentable analytical results.
- Led several classes in the Data Analytics program that were delivered 100% online, demonstrating proficiency in digital learning environments and remote data collaboration.

EDUCATION

St. Thomas University
Master of Science in Data Science

Webber International University
Bachelor of Science in Business Administration, Marketing Major, Computers Minor

TECHNICAL SKILLS

Microsoft 365, R, Python, SQL, Tableau, Power BI, Claude Code, data visualization tools
